

## LUMPKILLER DIES

Our Lumpkiller Dies are manufactured within the ISO 9001: 2000 quality system and conform to the various International Standards.

Used as an in-line aid to remove excess zinc from galvanized base material.

'Lumpkillers ' do as the name suggests, remove lumps of excess zinc prior to the rod entering the first die, therefore reducing the build up of zinc in the drawing cone, which would in normal circumstances inhibit the flow of lubricant into the drawing zone of the die.
